Maven Market Sales Dashboard Report

Prepared by: Simisola Adamo

Business Challenge Maven Market has requested an end-to-end business intelligence solution for its sales department to gain insights into sales performance and customer behavior.

Goal Develop a comprehensive Power BI dashboard to analyze and present sales and customer data, aiding strategic decision-making.

Objectives

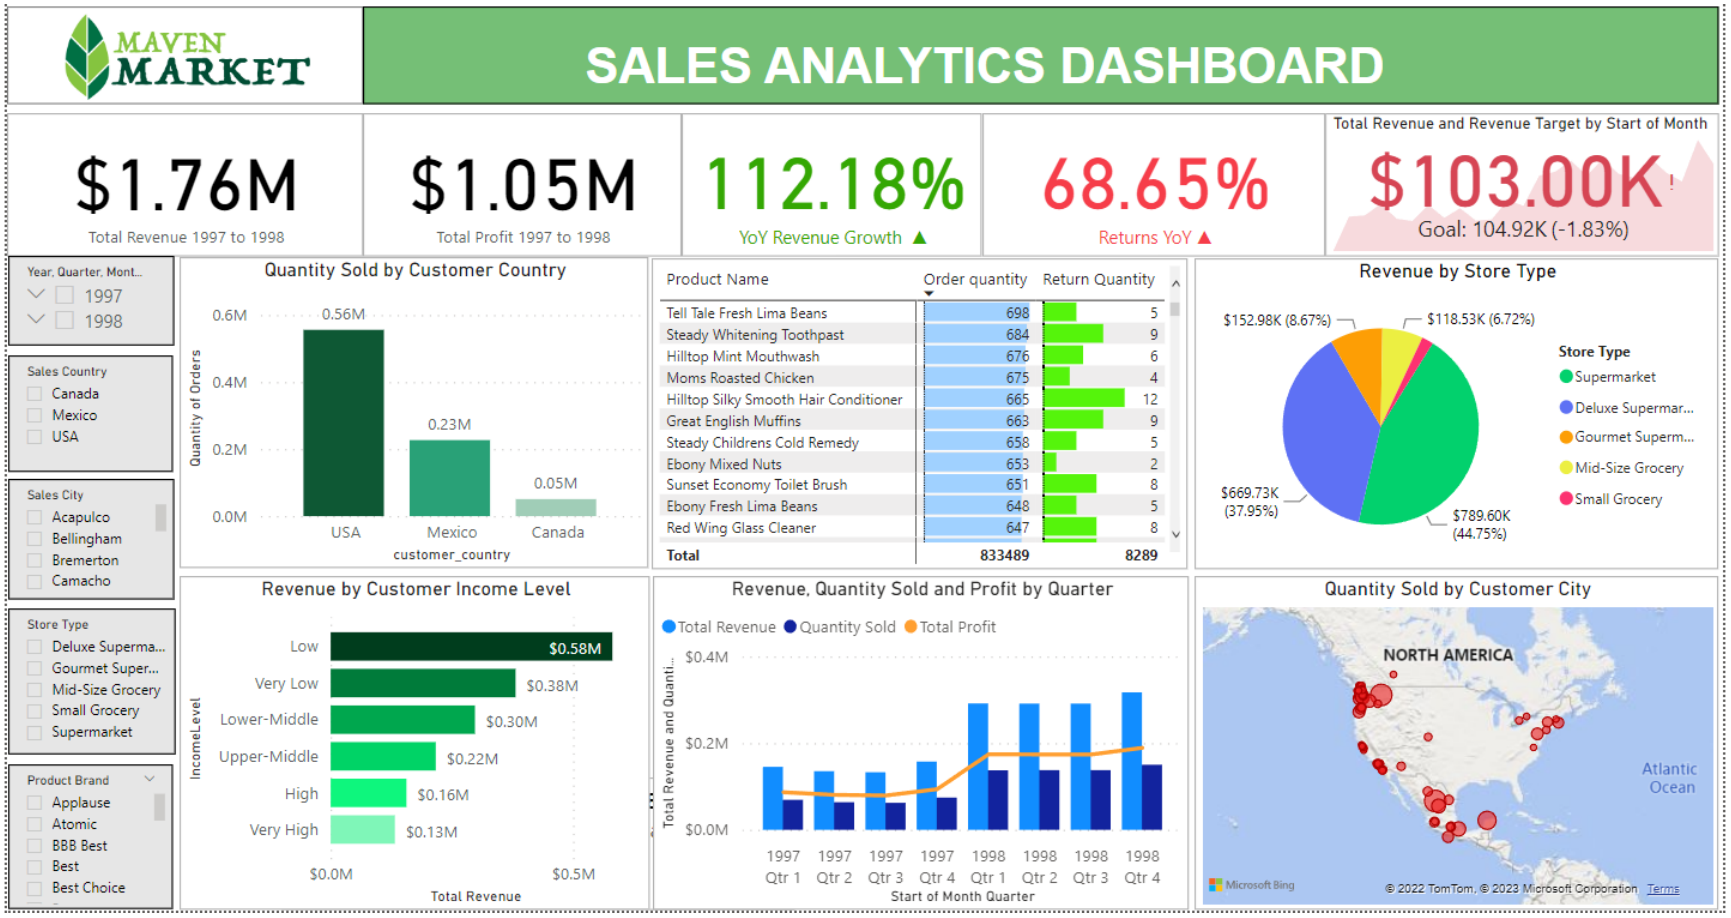

1. Create a dashboard to track Year-over-Year (YoY) Key Performance Indicators (KPIs), including sales, revenue, profit, and returns.
2. Compare sales performance across different countries and cities.
3. Identify the highest and lowest-selling products.
4. Recognize the customers who generate the most revenue for the company.

Key Steps

1. Develop mock-up questions and dashboard layout.
2. Connect and transform the raw data.
3. Build a relational data model.
4. Create new calculated columns and DAX measures.
5. Design an interactive report to analyze and visualize the data.
6. Address the following analytical questions:
    - What are the revenue, sales, and profit figures for 1997 and 1998?
    - Calculate YoY growth for the above KPIs.
    - Which customer countries and cities purchase the most goods?
    - Among the three operating countries, which contributes the most value?

- What income level generates the most business?
- What are the number of employees by ethnic group?
- What are the average tenure days per BU region for each employee type?

Final Dashboard

Executive Summary

This report details the development and findings of an end-to-end business intelligence solution designed for the Maven Market sales department. By transitioning from raw data to an interactive Power BI dashboard, we have gained a clear view of our global sales performance, year-over-year (YoY) growth, and shifting customer demographics.

Key Performance Highlights

Our primary objective was to track high-level KPIs to gauge the health of the business. The data reveals a period of significant scaling:

- Total Revenue: $1.76M for the 1997–1998 period.
- Total Profit: $1.05M.
- Revenue Growth: We achieved a remarkable 112.18% YoY increase in revenue.
- Return Rates: While sales are up, returns also saw a 68.65% increase.

Strategic Business Insights

Market Expansion & Geography

The most significant revenue spike occurred between Q4 1997 and Q1 1998. This perfectly aligns with our strategic expansion into Mexico and Canada. However, the USA remains our cornerstone market, leading in total quantity sold due to a more established brand presence.

Store Format Performance

Our data confirms that larger retail formats are driving the bulk of our value. Supermarkets and Deluxe Supermarkets combined to generate 82.7% of our total revenue. Smaller grocery formats represent a much smaller slice of the pie.

Customer Demographics & Behavior

We have identified a clear inverse relationship between household income and patronage. Our highest revenue-generating segments are the "Low" ($30K–$50K) and "Very Low" ($10K–$30K) income brackets.

Product Spotlight

- Top Seller: "Tell Tale Fresh Lima Beans" leads the catalog with 698 units sold.
- Quality Concern: While "Hilltop Silky Smooth Hair Conditioner" is a top-tier product by volume, it shows a disproportionately high return rate compared to other leaders.

Recommended Next Steps

1. Optimize Marketing: Tailor promotional efforts toward the low-to-mid income demographics and high-performing regions identified in the USA and Central Mexico.
2. Address Returns: We need to investigate the 68% jump in returns. Initial focus should be on logistics and quality control for our top-returned items to protect our margins.
3. Operational Focus: Continue prioritizing resources for Supermarket and Deluxe Supermarket channels, as these are our most efficient revenue engines.
4. Agile Monitoring: We will continue to use the live dashboard to monitor the 1998 expansion results as they mature, allowing us to pivot strategies in real-time.
